

Company Description

GenoSUR offers complete turn-key solutions, from product design, to material procurement, to manufacturing and supply chain management of custom medical, diagnostic and research devices.

Meeting the highest standards for quality, delivery and service, our team can assist and actively participate in every step of product development, including:

- Industrial and graphic design of packaging and components.
- Sourcing and procurement of components and equipment required for the manufacture of your medical device or sample collection kit.
- Development of procedures and quality controls to comply with ISO 13485 & ISO 9001 and other certifications that may be required for your project.
- Custom tube, vial and kit barcoding and labelling.
- Deployment of cost-effective sample return systems using the United States Postal Service, Canada Post, and other major couriers.
- Kitting and kit assembly process including registration, links to databases, etc.
- Freight management services.
- Fulfilment & distribution.

We are based in Santiago, Chile, an ideal location for sourcing a variety of component materials given the many free trade agreements currently in place, and cost efficient shipping routes to and from Asia and North America.

Our company is ISO 9001:2015 and ISO 13485:2016 certified. In 2018 alone, we manufactured over 350,000 kits.

PRODUCTS AND SERVICES

SUReYield™ DNA Collection Kit

With SUReYield™ DNA collection kit you can get optimal yield for your genomic applications. We offer customized branding and private labelling to fit your needs.

SUReYield™ DNA collection Kit combines best in class product development and tailored services that aim to fulfill all the requirements of your genomics company. Some of our product features are:

- Self or assisted DNA collection.
- Proprietary sample stabilization solution and FDA-registered swab for an easy buccal sampling.
- Twice DNA yield versus similar products in the market.
- This collection kit is compatible for use with infants.
- Tube labelling/tagging according to customers' requirements: Data Matrix, QR Codes or RFID for advanced identification or tracking of your samples.
- Kit packaging custom design including trays, boxes, inserts, etc.
- Pre-paid mail sample retrieval system with anti-spill containment system.
- Distribution center located in Dallas, TX, can stock and distribute each kit to the end-user.
